

LIGHTINGEUROPE
THE VOICE OF THE LIGHTING INDUSTRY

Walking tour to companies showing Human Centric Lighting

Light & Building 2016, Frankfurt

Light has been known for a long time to enable sight, safety and orientation. But light can do more than enabling vision. Light has the power to energize, to relax, to increase alertness, cognitive performance and mood, and to improve the sleep-wake cycle of people.

Light can do much more than saving energy. The true value of light lies in the combination of excellent visual, biological and emotional benefits.

Human Centric Lighting is lighting designed to benefit human health and wellbeing.

LightingEurope invites you to tour our member companies as listed to the right and to see how visual, biological and emotional benefits are now combined in the latest lighting solutions. At each booth you can get more information on the specific solution. Please, ask at the reception.

LightingEurope wishes you an interesting tour on Human Centric Lighting. For more information:
